

BID CRUSADES

Deliverable 1

Official Concept Overview Document

1. Competition Overview

Bid Crusades is an entrepreneurial capital allocation and strategic decision-making competition designed to simulate business creation under structured uncertainty.

The competition challenges teams to:

- Acquire assets through a live auction.
- Construct a viable business model in an open-market environment.
- Withstand a macroeconomic shock.
- Defend their strategic and financial decisions before a judging panel.

The event evaluates both quantitative financial robustness and qualitative strategic reasoning.

2. Competition Structure

The competition consists of two primary stages:

Stage I – Online Elimination Quiz

Stage II – Auction Simulation & Strategic Presentation

Only shortlisted teams from Stage I proceed to Stage II.

3. Stage I – Online Elimination Quiz

Format

- 20–25 objective questions
- 15 seconds per question
- Conducted online
- No AI assistance permitted

Qualification

Top 8 teams advance to Stage II.

Integrity Rule

Any use of AI tools or external assistance during the quiz results in immediate disqualification.

4. Stage II – Auction & Strategic Simulation

4.1 Auction Round

- 8 finalist teams participate.
- Each team receives 100 Crores of virtual capital.
- 40 assets are available for bidding.
- Assets are divided into four visible categories: A, B, C, D.
- Teams may construct any type of business (technology, infrastructure, energy, finance, logistics, etc.).
- No alliances or negotiations between teams are permitted.
- No asset reallocation is allowed after auction completion.

4.2 Disaster Mechanism

After the auction concludes, one macroeconomic disaster is randomly triggered.

Disaster Codes:

- W
- X
- Y
- Z

Each disaster impacts asset categories differently:

- One category appreciates by +20%.
- One category remains neutral (0%).
- Two categories depreciate by -20%.

Each disaster has equal probability (25%).

Portfolio values are recalculated immediately after disaster declaration.

4.3 Presentation Round

Teams present:

- Their business model.
- Capital allocation rationale.
- Risk management approach.
- Post-disaster strategy and financial performance.

Judges evaluate qualitative aspects of the presentation, while organizers compute quantitative performance using a formula-driven system.

5. Evaluation Overview

Total Marks: 100

Component	Marks
Organizer Quantitative Evaluation	50
Judge Qualitative Evaluation	50

Quantitative evaluation is formula-driven and automated. Qualitative evaluation is based on structured judging criteria.

6. Competition Objectives

Big Crusades aims to test and develop:

- Capital allocation discipline
- Strategic portfolio construction
- Risk anticipation capability
- Business model coherence
- Financial performance under volatility
- Crisis communication and analytical defense

The competition prioritizes structural thinking over superficial pitching.

7. Duration

Approximate Total Duration Round 1: 5 min(Online)

Approximate Total Duration Round 2: 5 Hours

- Auction Round
- Disaster Declaration
- Strategic Presentation

Detailed execution mechanics are outlined separately in the Vision & Execution Document.

8. Integrity & Fairness

- Equal disaster probability ensures neutrality.
- Asset categories are structurally balanced.
- Quantitative scores are formula-driven and non-editable.
- Judges evaluate only qualitative components.
- No negotiation policy ensures independent strategic design.

9. Core Philosophy

Big Crusades is not merely a business pitch competition.

It is a structured capital strategy simulation designed to reward:

- Intelligent diversification
- Strategic conviction
- Risk-aware thinking
- Disciplined execution
