

BIG CRUSADES

Deliverable 4

Vision & Execution Architecture Document

1. Vision Statement

Big Crusades is envisioned as a structured capital allocation simulation that mirrors real-world entrepreneurial decision-making under uncertainty.

The competition is designed to move participants through three controlled environments:

1. Knowledge filtration (Quiz Round)
2. Capital deployment under competitive pressure (Auction Round)
3. Crisis management and strategic defense (Disaster & Presentation Round)

The execution framework ensures that every stage progressively increases strategic depth, financial pressure, and analytical accountability.

2. Competition Architecture

The event operates in a strict chronological structure:

1. Stage I – Elimination Quiz
2. Stage II – Auction Simulation
3. Disaster Declaration
4. Organizer Quantitative Lock-in
5. Strategic Presentation & Judge Evaluation
6. Final Score Consolidation

Each stage is isolated in function and evaluation.

3. Stage I – Elimination Execution Plan

3.1 Setup

- Online quiz platform prepared.

- 20–25 timed questions uploaded.
- Timer fixed at 15 seconds per question.
- AI usage strictly prohibited.

3.2 Conduct

- All registered teams attempt the quiz simultaneously.
- Automatic scoring determines rankings.
- Top 8 teams qualify for Stage II.

3.3 Objective

This stage filters:

- Foundational financial literacy
- Logical reasoning capability
- Speed of decision-making

4. Stage II – Auction Execution Plan

4.1 Pre-Auction Setup

- 40 assets displayed with base bids.
- Each team allocated 100 Crores virtual capital.
- Visible categories A, B, C, D announced.
- Hidden vertical classification retained internally.

4.2 Auction Mechanics

- Assets auctioned sequentially.
- Open competitive bidding format.
- No alliance, negotiation, or asset pooling permitted.
- Final purchase price recorded immediately.

4.3 Capital Lock

- Teams must operate within 100 Crores.
- No borrowing allowed.
- Remaining budget declared at auction close.

5. Disaster Mechanism Execution

5.1 Declaration

One disaster (W/X/Y/Z) is randomly selected.

5.2 Impact Structure

Disaster	+20%	0%	0%	-20%
W	A	B	C	D
X	B	C	A	D
Y	C	D	A	B
Z	D	A	B	C

5.3 Immediate Recalculation

$$Post\ Value = \sum (Purchase\ Price \times Multiplier)$$

$$ROI = \frac{Post\ Value - Total\ Investment}{Total\ Investment}$$

Organizer quantitative scores are calculated immediately using the official scoring engine.
This score is locked before presentations begin.

6. Organizer Quantitative Lock-In

Immediately after disaster:

- Asset multipliers applied.
- Exposures calculated.
- Vertical presence evaluated.
- Business Strength computed.

- Bonus conditions checked.
- Organizer Score finalized (out of 50).

No modifications are permitted beyond this point.

7. Strategic Presentation Phase

7.1 Preparation Window

Teams are given a defined preparation period post-disaster to:

- Recalculate business positioning.
- Adjust narrative to reflect disaster impact.
- Prepare presentation slides.

7.2 Presentation Flow

- Business model explanation.
- Capital allocation logic.
- Risk reasoning.
- Post-disaster financial interpretation.
- Q&A defense.

Judges evaluate qualitative components independently.

8. Final Score Consolidation

$$Final\ Score = Organizer\ Score(50) + Judge\ Score(50)$$

Excel sheet auto-calculates:

- Judge Total
- Final Total

Final ranking is determined solely by total score.

9. Event Duration Blueprint

Approximate Time Allocation:

- Quiz Round – 30 to 45 minutes
- Auction Round – 3 to 4 hours
- Disaster Declaration & Quantitative Lock – 20 minutes
- Presentation Round – 60 to 90 minutes

Total Estimated Duration: Approximately 5 hours.

10. Operational Integrity Framework

- Disaster probability equal (25% each).
- Asset distribution structurally balanced.
- Quantitative scoring formula-driven.
- Judges assess only qualitative dimensions.
- No mid-round rule changes permitted.

11. Strategic Philosophy of Execution

The event is designed to:

- Reward intelligent diversification without forcing uniformity.
- Penalize reckless concentration.
- Test structural business coherence.
- Simulate volatility-driven entrepreneurial pressure.
- Separate financial logic from presentation polish.

Big Crusades is executed as a controlled competitive capital experiment — not merely a presentation contest.
